

Brexpiprazole

Lowers dopamine activity and helps with hearing or seeing things that others don't; feeling agitated and very excited with high energy; strongly believing things you usually don't; and having intrusive and distressing thoughts

A bit better after 1-2 weeks, full effects at 4-6 weeks

Common side-effects are feeling restless, feeling tired, shaky hands, diarrhoea, increased appetite, feeling dizzy and sore stomach

Physical health tests to check your heart, weight, BMI and blood tests to check sugar, fats and hormones

Talk to your doctor if you want to stop it

Call your doctor if you get much more impulsive

Take it in the morning and keep taking for 1-3 years
