

Guanfacine

Increases noradrenaline activity and helps with concentration, focus, impulsive behaviour and hyperactivity (signs of ADHD)

A bit better after 2-3 weeks, full effects at 8 weeks

Common side-effects are feeling tired, loss of appetite, trouble sleeping, feeling dizzy, headache, strange dreams and stomach ache

Physical health tests to check your heart, weight and height

Don't stop taking it suddenly because this can make your blood pressure and heart rate go up suddenly

Take it in the evening and see your doctor for every 3-6 months

Call your doctor if you get more angry or agitated or have thoughts of hurting yourself
